

## Teamwork makes everything better

OpiSafe Teamwork is the ultimate engagement tool for your patients during office visits. Teamwork makes collecting patient feedback easy during every interaction – from onboarding new patients to follow-up visits. And since OpiSafe Teamwork is workflow agnostic, your practice can engage patients anywhere: during check-in, in the waiting room or in the exam room without compromising patient privacy.

### Here's how it works:

**1 Search for the patient**  
by their Patient ID or  
Medical Record Number.

**2 If baseline assessments**  
have not been assigned to  
the patient, you'll be prompted  
to select assessments to  
administer at baseline.

**3 Give OpiSafe Teamwork**  
to the patient.

**4 Teamwork enters a secure**  
mode for patient engagement.  
The patient can now complete  
their assessments and set up  
their account on OpiSafe.

**5 While the patient completes**  
the assigned tasks, providers  
can continue to set up the  
patient's OpiSafe file and build  
the patient's pain agreement.

**6 Once the provider has set up**  
an agreement for the patient,  
the patient will be prompted to sign  
their patient/provider agreement.

**7 After the patient has**  
completed all their tasks,  
OpiSafe Teamwork will lock the  
patient out of the application.

**8 The provider can then unlock**  
the app and continue to use  
it for additional patients.

**9 New patients will receive**  
email from OpiSafe that will  
guide them through using  
OpiSafe between office visits.
